G) PROJECTS INVOLVED

- EUROBRISA:** Project entitled "A EURO-BRazilian Initiative for improving South American seasonal forecasts". The aims of this project are: a) Strengthen collaboration and promote exchange of expertise and information between European and South American seasonal forecasters; b) Produce improved well-calibrated real-time probabilistic seasonal forecasts for South America; and c) Develop real-time forecast products for non-profitable governmental use (e.g. hydropower production, agriculture and health). Additional information available at <http://eurobrisa.cptec.inpe.br/>
- SPECS:** EU-funded project entitled "Seasonal-to-decadal climate Prediction for the improvement of European Climate Services". Additional information available at <http://www.specs-fp7.eu/SPECS/Home.html>
- ENSEMBLES:** EU-funded project entitled "ENSEMBLE-based Predictions of Climate Changes and their Impacts". The overall objective of the project is to maintain and extend European pre-eminence in the provision of policy relevant information on climate and climate change and its interactions with society. Additional information available at <http://www.ensembles-eu.org/>
- CLARIS LPB:** EU-funded project entitled "A Europe-South America network for climate change assessment and impact studies in La Plata Basin". The project aims at predicting the regional climate change impacts on La Plata Basin (LPB) in South America, and at designing adaptation strategies for land-use, agriculture, rural development, hydropower production, river transportation, water resources and ecological systems in wetlands. Additional information available at <http://www.claris-eu.org/>
- CLARIS:** EU-funded project entitled "A Europe-South America network for climate change assessment and impact studies". The overall objective of the project is to strengthen collaboration between research groups in Europe and South America to develop common research strategies on climate change and impact issues in the subtropical region of South America through a multi-scale integrated approach (continental-regional-local). Additional information available at <http://www.claris2-eu.org/>

CLIMAX:	Belmont forum project entitled "Climate services through knowledge co-production: A Euro-South American initiative for strengthening societal adaptation response to extreme events". An inter- and trans-disciplinary framework based on a European-South American research cooperation is implemented to underpin climate services in South America. Additional information available at http://www.climax-sa.org/
DEMETER:	EU-funded project entitled "Development of a European Multimodel Ensemble system for seasonal to interannual prediction". The objective of the project was to develop a well-validated European coupled multi-model ensemble forecast system for reliable seasonal to interannual prediction. During my PhD., I developed novel statistical (Bayesian) methods for the calibration and combinations of the multi-model ensemble forecasts of ENSO and South American rainfall produced in DEMETER. The use of seasonal forecast information to predict river flow discharge was also investigated. These statistical methods will be implemented in the EUROBRISA project. Additional information available at http://www.ecmwf.int/research/demeter/
